Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Mr. Remus Fetea on September 6, 2005.

The application has been amended as follows:

- Claims 29, 30 and 37 – 40 were cancelled.

Reasons for Allowance

3. The present claims are deemed allowable over the references of record since the references of record fail to disclose or render obvious the claimed bias point limitation.

While the prior art of record discloses the general structure of claimed magnetoresistive element, the prior art of record fails to disclose or render obvious the combination of the claimed structural limitations, along with controlling the magnetoresistive element to possess a bias point meeting applicants claimed limitations. The Examiner further notes that Figure 15 provides clear evidence that the bias point, as measured by applicants, is not an inherent feature to all magnetoresistive elements.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner's Comments

5. In order to better clarify the record, the Examiner wishes to note the reference to Gill (U.S. Patent No. 5,828,529) which discloses controlling the bias point associated with the free layer, as well as the various factors influencing the bias point (*col. 2, line 50 bridging col. 3, line 15 and col. 5, line 35 bridging col. 8, line 21*). However, Gill is directed to positioning the zero of the bias point and not controlling the magnitude of the bias point as presently claimed. Furthermore, Gill fails to teach or suggest the requisite thickness of the first ferromagnetic layer, in part teaching away from using extremely thin free (i.e. "first") ferromagnetic layers (*col. 2, lines 28 – 49*).

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin M. Bernatz whose telephone number is (571) 272-1505. The examiner can normally be reached on M-F, 9:00 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carol Chaney can be reached on (571) 272-1284. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
